Phased Roadmap

4. Data Sources & Methodology

1. Executive Summary

This report presents a comprehensive SEO audit of **formuland.com** for a **E-commerce (Shopify) - European infant formula retailer, YMYL** site, generated on November 02, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

55/100

SEO HEALTH SCORE

Critical Issues Found:

1. **Critical:** Flagship buying guide gives health advice that contradicts EU law and the site's own product pages
2. **Critical:** Homepage hero is a 48.5 MB video that keeps the H1 and CTA invisible
3. **High:** Conflicting feeding and preparation charts on infant-formula product pages
4. **High:** No named author or medical reviewer on YMYL content; trust pages contradict each other
5. **High:** Shipping, duties and return statements contradict each other

Quick Wins:

1. Product template: change the 'Product & Purchase Disclaimer' H1 to H2 (44 PDPs) and delete the generic feeding chart block.
2. Homepage hero: make the H1/CTA overlay visible at first paint, add a poster image and a <= 2 MB faststart mobile video; point the hero CTA at /collections/organic-baby-formula instead of the redirecting -temp URL.
3. Add an H1 and a meta description to /pages/about-us, /pages/nara-organics-formula-recall and /pages/contact; 301 /pages/our-company to /pages/about-us.
4. Make the canonical tag unconditional in the product template (50 PDPs have none).
5. Add BreadcrumbList and gtin13 to Product JSON-LD; point Article mainEntityOfPage at the article URL.

2. Audit Categories

2.1 Technical SEO

Score: 72/100

What Works

- HTTPS with HSTS, CSP frame-ancestors, X-Frame-Options and nosniff
- Server-rendered HTML; key pages do not depend on JS for text
- Clean Shopify robots.txt with facet/sort rules and a sitemap index
- No noindex leaks found in 468 crawled 200 pages; TTFB about 250 ms unthrottled

Findings

Cloudflare bot challenge on non-browser clients Medium

32 URLs returned 429 'Verifying your connection...' in the crawl; later every path including /robots.txt returned 403 cf-mitigated: challenge for about 7 minutes.

Recommendation: Review Cloudflare/Shopify bot settings and security events; confirm verified bots (Googlebot, Bingbot, OAI-SearchBot, PerplexityBot) are exempt; check Crawl Stats in Search Console.

50 of 249 crawled products have no rel=canonical Medium

Affected: HiPP Baby Soft, Earth Mama, Weleda, diapers, LittleOak formula products.

Recommendation: Output {{ canonical_url }} unconditionally in theme.liquid / the product template; verify with view-source on 3 affected URLs.

Utility, duplicate and thin pages are indexable and in the sitemap Medium

customer-portal, quiz-results (duplicates formuland-quiz), shipping-protection product, 6 Avada HTML sitemap pages (120 of 193 links point to formuland.myshopify.com).

Recommendation: Set the seo.hidden metafield on utility pages, delete the Avada pages and uninstall the app.

Sitemap lastmod is unreliable Medium

All 316 products share one lastmod timestamp; ja-intl/zh-intl lastmod equals request time.

Recommendation: Find the app bulk-touching products; keep lastmod meaningful so Google trusts it.

Duplicate x-default hreflang where two hreflang systems overlap Low

Theme block (en-US, en-CA, x-default) plus Shopify Markets block (29 tags); 142 US-only products correctly have no Markets block.

Recommendation: Drop the theme x-default on pages where the Markets block is present.

AI-agent robots.txt group does not inherit * rules Low

/admin, /apps/loyalty and sort_by URLs are allowed for the AI group.

Recommendation: Copy the Disallow lines into that group.

2.2 Content Quality

Score: 41/100

What Works

- Long, detailed product pages (median about 1,977 words) and collections (median about 1,822)
- Recall page is well-sourced
- Large blog library (142 articles) on core parent questions

Findings

Health misinformation in the flagship organic-formula guide Critical

DHA/ARA 'avoid these whenever possible' contradicts EU 2016/127 and the site's own PDPs; recommends a brand not sold; outdated allergen-avoidance advice in /what-to-feed-your-infant.

Recommendation: Correct or unpublish the passages now; rewrite with citations and a named, credentialed reviewer (pediatric dietitian/pediatrician).

No identifiable author, credentials or medical review High

'Posted by Formuland' on every article; no reviewer, no sources section, mismatched dates.

Recommendation: Create author and reviewer profile pages; add 'Medically reviewed by' with date and credentials; cite primary sources.

Conflicting feeding charts on PDPs High

Generic chart conflicts with the manufacturer chart on HiPP, Holle and Lebenswert pages.

Recommendation: Show only the manufacturer's chart for each product.

Trust pages contradict each other High

500,000 vs 1M orders/families; California vs Europe office; 10 years vs founded 2014; no address or phone found.

Recommendation: Merge into one About page with verified facts, address, founders and team; 301 the duplicate.

Templated or unsupported product copy Medium

Holle/Lebenswert copy is generic; Lebenswert copy claims benefits for 'learning difficulties and dyslexia' without support.

Recommendation: Rewrite with manufacturer-verified facts; remove unsupported health claims.

2.3 On-Page SEO

Score: 56/100

What Works

- Every crawled page has a title and canonical-safe URL structure
- Collections have unique, descriptive H1s

Findings

Meta descriptions are auto-excerpts High

338 of 468 exceed 160 characters; 146 are cut mid-sentence; 13 missing.

Recommendation: Write 140-155 character descriptions, starting with top collections, products and the 30 most-visited articles.

Trust and YMYL pages lack H1 and meta description High

/pages/about-us, /pages/nara-organics-formula-recall, /pages/contact, FAQ.

Recommendation: Add one descriptive H1 and a meta description to each.

Second H1 in the product template Medium

44 PDPs have 'Formuland - Product & Purchase Disclaimer' as an extra H1.

Recommendation: Change it to H2 or a styled paragraph.

Long, keyword-stuffed titles Medium

196 titles exceed 60 characters; homepage title repeats 'European ... Formula' four times.

Recommendation: Rewrite templates to 50-60 characters: primary keyword, differentiator, brand.

Weak internal linking to commercial collections Medium

88 crawled URLs have 1 or fewer inbound links; /collections/hipp-formula-stage-1..4 and /collections/kendamil-organic-formula are not linked from crawled pages.

Recommendation: Link stage and brand collections from navigation, PDP breadcrumbs and related articles.

2.4 Schema / Structured Data

Score: 62/100

What Works

- All 31 JSON-LD blocks parse; no microdata/RDFa conflicts or deprecated types
- Product with Offer and AggregateRating matching visible reviews (HiPP 4.91 / 107)
- Organization and WebSite on every page

Findings

Return policy contradiction blocks hasMerchantReturnPolicy High

/policies/refund-policy says formula is non-returnable; PDP promises a 30-day store-credit guarantee.

Recommendation: Reconcile the policy text first, then add MerchantReturnPolicy (see findings/schema.md options A/B).

No shippingDetails or GTIN on offers Medium

Valid EAN-13 barcodes exist in Shopify data; multipack variants reuse the single-can barcode.

Recommendation: Add OfferShippingDetails and gtin13 from the single-unit variant; give multipacks their own identifiers or omit.

Two Product nodes per PDP with the same relative @id Medium

Theme block carries offers; Judge.me block carries reviews.

Recommendation: Emit one merged Product node or use an absolute shared @id.

BreadcrumbList missing on products and articles Medium

Present on 2 of 74 collections, 0 of 249 products, 0 articles.

Recommendation: Use the paste-ready graph in findings/schema.md.

Article markup issues Medium

mainEntityOfPage points at the homepage; author is a Person named Formuland; dateModified does not match the visible date.

Recommendation: Use the BlogPosting template in findings/schema.md.

2.5 Performance (CWV)

Score: 30/100

What Works

- TTFB about 250 ms unthrottled, 103 Early Hints sent
- Lab CLS 0.002-0.006
- Product LCP 2.83 s throttled (eager main image, fetchpriority high)
- Images served as WebP/AVIF from Shopify CDN

Findings

48.5 MB hero video gates LCP, H1 and CTA Critical

1080p60, about 19 Mbps, moov atom at end of file, no poster; throttled LCP 24.5 s, one run never painted a frame in 30 s.

Recommendation: Poster image as LCP, <= 2 MB faststart mobile encode, visible H1/CTA at first paint.

2.6-3.0 MB compressed JavaScript High

263-399 requests; long-task total 4.4-5.6 s at 4x CPU.

Recommendation: Remove or defer app embeds that are not used on each template.

Third parties are about 60% of non-video bytes High

GTM container alone 1.34 MB; Clarity loads via tag manager although commented out in the theme.

Recommendation: Audit the GTM container; delay non-essential tags until interaction.

HTML is about 720 KB (median 687 KB) High

Over half is inline app JS/JSON (Appstle 97-143 KB); page text starts 230-324 KB into the HTML.

Recommendation: Scope app embeds to the templates that need them.

VWO anti-flicker hides the body for up to 2 s Medium

Effect not isolated in lab runs.

Recommendation: Remove the snippet when no test is running, or limit it to tested pages.

2.6 AI Search Readiness

Score: 57/100

What Works

- robots.txt allows all major AI search, retrieval and training bots
- Key pages are server-rendered
- Shopify-generated llms.txt, agents.md, UCP and WebMCP tools are present

Findings

YMYL factual errors reduce citability Critical

AI engines cross-check health claims; the DHA/ARA and allergen statements conflict with authoritative sources.

Recommendation: Fix the content first (see Content Quality).

No expert entities behind health content High

No Person authors/reviewers, thin Organization entity (no legal name, address, founders), conflicting About claims.

Recommendation: Publish credentialed people, one Organization node with sameAs, address and founders.

Comparison chart not machine-readable High

Three images, 5 words.

Recommendation: Dated HTML tables with brand, protein base, stage, key ingredients and links.

WebMCP add_to_cart description tells agents not to ask the user to confirm Medium

Shopify-owned webmcp script, 12 tools.

Recommendation: Report to Shopify; confirm checkout still requires explicit user approval.

Lighthouse Agentic Browsing not measured Info

PSI quota exhausted.

Recommendation: Run npx lighthouse --only-categories=agentic-browsing locally.

2.7 Images

Score: 68/100

What Works

- WebP/AVIF delivery
- Product gallery images all have alt text
- Main product image eager with fetchpriority=high

Findings

Desktop hero image downloaded on mobile High

210 KB image hidden with display:none but loaded eagerly.

Recommendation: Use one <picture> with media sources.

28 eager country-flag images on every page Medium

57.5% of all images; they account for 92% of empty-alt images (decorative, correct).

Recommendation: Lazy-render the country selector.

Low srcset coverage and missing width/height on some images **Medium**

Some blog thumbnails and hero images also lack alt text.

Recommendation: Use Shopify image_tag with widths and sizes; add alt to link-wrapped thumbnails.

3. Action Plan

Phase 1: Critical Fixes Week 1

- Correct or unpublish the DHA/ARA, Jovie and allergen passages in the two flagged articles
- Remove the generic feeding chart from all PDP templates (manufacturer chart only)
- Hero: visible H1/CTA at first paint, poster image, <= 2 MB mobile video; fix the -temp CTA link
- Publish one shipping, duties and returns statement and apply it to PDPs, collections, popups and the refund policy
- Check Cloudflare bot settings so verified search and AI bots are not challenged

Phase 2: High-Impact Improvements Weeks 2-3

- Unconditional canonical in the product template (50 PDPs)
- Disclaimer H1 to H2 (44 PDPs); H1 and meta description on About, Recall, Contact, FAQ
- Merge /pages/our-company into /pages/about-us (301) with one verified set of facts and an address
- Product JSON-LD: one merged node, BreadcrumbList, gtin13, shippingDetails, MerchantReturnPolicy
- Cut JS: audit GTM, scope Appstle and other app embeds, lazy-load flags, one hero image per viewport
- seo.hidden on utility pages; delete Avada HTML sitemaps; rewrite top meta descriptions and titles

Phase 3: Content & Authority Month 2

- Named author and medical reviewer program with profile pages and schema
- Rebuild the comparison chart as dated HTML tables linking to products
- New page: Is European baby formula legal and safe in the US? (FDA status, import, storage)
- Pillar guide for 'european baby formula'; Stage 1 hub; goat-milk brand comparison
- Rewrite templated Holle/Lebenswert copy; refresh or retire outdated articles

Phase 4: Monitoring & Iteration Ongoing

- Connect Search Console, CrUX and GA4 to the audit tool for field data
- Capture a drift baseline and re-audit after each release
- Re-crawl the 32 challenged articles and the international storefronts
- Run Lighthouse Agentic Browsing and axe locally

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)

Report generated by Claude SEO (Google SEO Intelligence Skill), November 02, 2026
Methodology based on Google Web Vitals thresholds, Search Console documentation, and Lighthouse scoring algorithms.
